

## Valcom Clocks

### Clock Accessories - Clock Protocol Interface

The Valcom Digital Protocol Interface conditions the 24-hour enhanced digital output from the Valcom (V-SER or V-2927) clock cards to allow the Valcom communications systems using these cards to provide clock correction data to a (V-WMC) Wireless Master Clock Transceiver, a (V-WMCR) Wireless Master Clock Repeater, or a (V-CCU) 2-Wire Clock Controller.\*

\*The V-CCU is part of the V-VCU package, which includes the V-CCU and a power supply.
